

## Installation Instructions for SIMS Version 2.X

1. Double click on the installation program called "InstallSIMS.exe". This is the bootstrap installer that will help you install all of the components.
2. Click the "Install" button to start the installation of the components that are not currently installed.
3. Optionally install the Occurrence. See Notes below.
4. Once the installation is finished (all components) then run SIMS.
5. SIMS will need to first create the database. You will first be asked for the database information. The window should, by default, contain the correct information, click OK. Then you will be asked if you would like to create the database. Click Yes.
6. Once the database has been created you will be told that no users were found. Just click OK. Then add the first User from the Admin -> Users menu.
7. Installation is now complete.

### Notes:

The Occurrence installation is not needed since this application is also included with the SIMS installation. The Occurrence installation is only for people that need to write Occurrence reports but do not have access to SIMS (people like Security officers)

SIMS now uses MSDE as the database and the instance name will be SIMS. The DB login (defined in setup.ini) is "sa" and "manager"

**If you have any problems with the installation of SIMS please call:**

James Malish  
(604) 298-9452

**Once SIMS is installed please call David Lea for instructions on the features and functions of SIMS.**
